

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

	Comparison of Deaf and Dumb.					
	1835.			1845.		
	M.	F.	Total.	M.	F.	Total.
Towns .....	58	43	101	75	48	123
Rural Districts.....	540	450	990	531	452	983
Total.....	598	493	1,091	606	500	1,106

The number of gypsies and wanderers, who may be said to have no settled abode, amount to 1,145. The insane, blind, deaf and dumb, and lepers, among these, are not included in any of these tables. Their number added to the census, makes the total population of Norway in 1845 amount to 1,329,616 souls.

#### MISCELLANEOUS.

##### *Progress of Great Britain during the first half of the Nineteenth Century.*

(From the "Economist," with corrections.)

THE nineteenth century having completed half its course, we deem it well to give a sketch of the progress made by Great Britain during the last fifty years, a progress of which we have just reason to be proud.

*Population.*—In the first place, we give a comparison of the population in 1700, 1801, and 1851.

		1700.	1801.	1851.	
	England and Wales....	5,000,000	8,892,000	17,922,768	
	Scotland .....	1,000,000	1,599,000	2,870,784	
	Ireland.....	2,000,000	4,500,000	6,515,794	
	Total.....	8,000,000	14,991,000	27,309,346	

From the preceding table, it appears, that whilst, during the whole of the last century, the population did not quite double itself, in the first *half* of this present one it has nearly redoubled, consequently, the increase has been twice as rapid in the last *fifty years* as it was in the last *century*.

*Territories.*—We are far from looking upon the extension of a nation's territory (except when it has been obtained over uninhabited or barbarous countries) either as a necessary element of power or honour, or as a subject for rejoicing. However that may be, we have added to our possessions since 1800. In Europe, 10 islands, having a total superficies of 1,192 square miles, and a population of about

350,000 souls. In the West Indies, 100,058 square miles, with a population of 130,000 souls. In Africa, independent of our last conquest of the Caffres, 201,000 square miles, and 300,000 souls. In Australia, colonization, and not conquest, has been our aim; but, at least, New Zealand may be considered as a newly-acquired territory, since our right to this colony has only been formally established within the last twenty years. One may say that the civilized population of Australia has been entirely created since 1800; it amounted, according to the last census (1842), to 217,000 individuals; and since the emigration, from then till 1848, has been more than 40,000. Whilst the natural increase of population has been rapid, we cannot put the number of our fellow-creatures existing in that country at less than 300,000. Of all our possessions, it is perhaps the most flourishing and full of promise; and it is from this that we may expect the future extension of the greatness and power of Britain.

The exports of wool from these colonies, which, in 1819, did not amount to more than 74,284*l.*, attained, in 1849, the immense sum of 35,879,000*l.* Nothing was wanting to these colonies, to make them rapidly progress, except to enjoy fully the blessings of English liberty, and this advantage has been granted them by the Act of Parliament recently passed in their favour.

In Asia, our increase of territory since the beginning of the century has been larger than in any other part of the world. In China, we have gained the island of Hong Kong; and in India, we have added to our empire, independent of the recent acquirement of the Punjab and Scinde, 228,700 square miles, with a population of 100,000,000 natives.

*Industry and Commerce.*—The extraordinary increase of our industry has been so often exhibited, that we shall limit ourselves to a table which will show at a glance some of the most remarkable facts of this increase.

		1800.	1849.	Increase per Cent.
Exports—Official value .....	£	24,304,000	190,101,000	682
" Declared value.....	"	39,471,000	63,596,000	61
Imports—Official value .....	"	28,257,000	83,330,000	194
Export of Manufactured Cotton.....yds.		72,000,000	1,223,500,000	1,599
Oil consumed in Great Britain.....tons		15,600,000	38,400,000	146
Cast Iron .....	"	150,000	1,750,000	1,066
Tonnage .....	"	3,337,000	11,501,000	244
Raw and Spun Silk .....	lbs.	1,167,000	5,618,000	382
Raw Wool .....	"	8,615,000	75,100,000	772
Raw Cotton .....	"	56,000,000	700,000,000	1,150

It will be seen from this table, that whilst our population has almost doubled itself since 1800, our importations are more than *three times*, our exports *eight times*, and our produce almost *ten times* greater, than at the commencement of the century.

*Metropolis of London within the 135 Districts of the Registrar-General, comprising the Bills of Mortality in an area of 74,070 acres, and containing about 2,200,000 Inhabitants, in the Year 1849.* By C. A. COCKE, Esq.

Note.—In Maintenance consists of the Cost of Food, Clothing, and Necessaries supplied for the use of the Poor in the Workhouse. Out-Relief consists of Relief in Money and kind, together with Relief by way of Loan (if any), to the Out-door Poor.  
The above Expenditure applies to 607 Unions and Single Parishes under the Poor Law Amendment Act, but does not include 490 parishes under Local Acts, Gilbert's Act, and the 3rd of Elizabeth. The cost of maintaining Irremovable poor is included in the above Return. Total Population of England and Wales, according to the Census of 1861, 17,922,762.

**POST OFFICE.**  
 Parliamentary Return, June, 1852.  
*(Mr. Charles Villiers.)*

The Commission on Money Orders was, on and from the 20th November 1840, reduced as follows:

For any sum not exceeding 2*l.*, from 6*d.* to 3*d.*

For any sum above 2*l.*, and not exceeding 6*l.*, from 1*s.* 6*d.* to 6*d.*

PROCEEDINGS OF THE STATISTICAL SOCIETY OF  
LONDON.

SESSION 1851-2.

*Eighth Ordinary Meeting. Monday, 21st June, 1852.*

Lieut.-Colonel W. H. Sykes, Vice-President, in the Chair.

The undermentioned Gentlemen were elected Fellows of the Society, viz.—

Sidney Hanson, Esq., M.D.	George Parsons, Esq. James Ebenezer Saunders, Esq.
---------------------------	---

The following Papers were read:—

1. On the Effect of the Remission of Taxes on the Revenue, in the thirty years from 1822 to 1851 inclusive. Communicated by Dr. Guy, one of the Honorary Secretaries.
2. On the Statistics of the Insane, Blind, Deaf and Dumb, and Lepers of Norway, by Professor Holst. Translated from the Danish by A. S. Oliver Massey, Esq.
3. On the Population of the Colony of British Guiana, as enumerated on the 31st March, 1851, being the substance of a Dispatch from Governor Barkly, presented to the Society by the Right Hon. Earl Grey, Her Majesty's late Secretary of State for the Colonies.

**THE MARRIAGES, BIRTHS, AND DEATHS,  
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF ENGLAND,  
*For the Quarter ending the 31st of March, 1852,*  
AS PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.**

THIS return comprises the births and deaths registered by 2,190 registrars in all the districts of England during the Winter quarter ending March 31st, 1852; and the marriages in more than 12,000 churches or chapels, about 3,228 registered places of worship unconnected with the Established Church, and 623 superintendent registrars' offices, in the quarter that ended December 31st, 1851.

The return of marriages is not complete; but the defects are inconsiderable, and approximative numbers have been supplied from the records of previous years.

The general results of the return are satisfactory; the marriages exceed the average number, the births are above, the deaths are below the average of the kingdom.

**MARRIAGES.**—90,936 persons were married in the last quarter of the year ending December 31st, 1851. In England the greatest proportion of marriages is always celebrated in the months of September, October, November, after harvest; and the numbers in the last season not only exceeded the marriages in the previous quarters of 1851, but those in the corresponding quarters of previous years. Allowing for increase of population, the proportion of marriages was slightly less than in the autumns of 1845 and 1850, but greater than in any other autumn since 1842. 1 in 58 of the persons living was married in 1851; or there was 1 marriage to every 117 persons living.

The marriages increased chiefly in London, Cornwall, Gloucestershire, Worcestershire, Warwickshire, Rutlandshire, Nottinghamshire, Lancashire, and North Wales. They declined in the Southern, South Midland, and Eastern counties; in Wiltshire and Devonshire, Cumberland, Westmoreland, and Monmouthshire. The increase was most striking in Reigate, Croydon, Maidstone, East Ashford, Faversham, Brighton, Falmouth, Taunton, Bristol, Gloucester, Wolverhampton, Birmingham, Derby, Preston, Hull, Durham.

\* The numbers up to 1849 have appeared in the Annual Reports.

The rate of marriage was high but stationary, or slightly declining, in Liverpool, Manchester, Leeds, and Sheffield.

BIRTHS.—The births of 161,776 children, born alive, were registered in the months of January, February, and March 1852. The number greatly exceeds the average of the season, which is generally the most prolific of the year. So many births were never registered before in the same time. London, the West Midland counties, Yorkshire, and the Northern counties, exhibit the greatest excess over their ordinary average.

INCREASE OF POPULATION.—As the births registered were 161,776, the deaths 106,682, an addition is made to the population in 3 months of 55,094 persons. This is the natural increase. During the same period, an army of 57,874 emigrants sailed from the ports of the United Kingdom at which there are government emigration officers; 51,999 of them sailed from three English ports; 8,438 from London, 1,798 from Plymouth, and 41,763, comprising an indefinite number of the Irish people, from Liverpool. 1,399 emigrants sailed from Glasgow and Greenock; 4,476 from Irish ports.\*

The average price of wheat during the 3 months was 40s. 10d., or 4s. higher than it was in the last three months of 1851, when more wheat was sold. The quantities of wheat and wheat flour entered for home consumption at the chief ports of Great Britain rapidly diminished in the three last periods from 91,040 to 47,986 and 27,540 quarters weekly. The price of potatoes at the waterside market, Southwark, was 70s. a ton, and ranged from 3s. to 4s. a hundred weight. The average price of mutton by the carcass ranged from 3½d. to 5¾d.; and has scarcely varied for 9 months. The price of the inferior beef rose from 3d. to 3½d. The average price of consols was 97½.

*The Average Prices of Consols, Wheat, Meat, and Potatoes, also the Average Quantity of Wheat sold and imported Weekly, in the three last Quarters ending the 31st of March, 1852.*

Quarters ending	Average Price of Consols.	Average Price of Wheat per Quarter in England and Wales.	Wheat sold in the 290 Cities and Towns in England and Wales making Returns.	Wheat and Wheat Flour entered for Home Consumption at Chief Ports of Great Britain.	Average Prices of Meat per lb. at Leadenhall and Newgate Markets (by the Carcase).		Potatoes (York Regents) per Ton at Waterside Market, Southwark.
					Beef.	Mutton.	
1851 Sept. 30.	96½	40s. 7d.	74,714	91,040	3d.—5d. Mean 4d.	3½d.—5¾d. Mean 4½d.	90s.—110s. Mean 100s.
Dec. 31.	97½	36s. 7d.	109,506	47,986	3d.—5d. Mean 4d.	3½d.—5¾d. Mean 4½d.	65s.—75s. Mean 70s.
1852 Mar. 31.	97¾	40s. 10d.	95,532	27,540	3½d.—5d. Mean 4½d.	3¾d.—5¾d. Mean 4¾d.	60s.—80s. Mean 70s.

*Note.*—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending September 30th, was 971,276; for the 13 weeks ending December 31st, 1,423,582; for the 13 weeks ending March 31st, 1,241,921. The total number of quarters entered for Home Consumption was, respectively, 1,183,523; 671,803; and 358,024; the second total, however, embraces the returns of 14 weeks. The price of potatoes in the quarter ending September, refers to the period during which the old supply continued.

\* From a return with which the Registrar-General has been favoured by the Emigration Commissioners.

**STATE OF THE PUBLIC HEALTH.**—The mortality of England is highest in the winter quarter. Notwithstanding the peculiarities of the weather, the mortality in the past winter has been considerably below the average of the season. The annual rate of mortality in the winter quarter of 1852 was 2·364 per cent., which is less by 0·111 than the mean annual rate of mortality in the 10 previous winters. To every 22 deaths in previous winters, after allowing for increase of population, there were 21 deaths in the past winter, during which, as Mr. Glaisher has shown in his valuable account of the meteorology, the temperature was 3 degrees above the average.

The health of the districts comprising chiefly small towns and country parishes was considerably above the average standard; the towns exhibited less improvement, and lost a fourth part more of the population by death than the country districts.

In LONDON 14,592 deaths were registered in the three months of January, February, and March; 14,481 in the thirteen weeks ending March 27th. Small-pox, scarlatina, and hooping-cough prevailed to a considerable extent. Influenza, bronchitis, and pneumonia were fatal to 40, 1,422, and 908 persons; whereas the deaths in the previous winter of 1851 from the same diseases were 205, 1,612, and 1,244. Consumption, on the other hand, was more fatal in the two last than it was in the two previous winters. Scurvy and purpura were only fatal to 10 persons. 527 persons died in the thirteen weeks of typhus. 62 women died of metria or puerperal fever; and 62 of other diseases incidental to child-bearing. 120 cases of erysipelas are recorded. Cancer is an example of great regularity in the mortality some diseases cause; in the five last winters the deaths from cancer were 222, 231, 213, 236, and 231. Deaths from diseases of the nervous system remained very uniformly the same. Diseases of the heart are returned in increasing numbers; to that cause 425 deaths were referred in 1848, and 603 in 1852. The increase is probably due to the advancement and diffusion of medical knowledge; for many of these deaths would in former years have been referred to dropsy. Nephria, or Bright's disease, has increased from the same cause. One of the most singular facts in the return is the increase of deaths by carbuncle; which from an average of about 2 rose to 17 in the quarter. 19 deaths were directly ascribed to intemperance, 29 to delirium tremens, 12 to privation, 64 to the want of breastmilk, 4 to cold, 23 to poison, 88 to burns and scalds, 76 to hanging and suffocation, 72 to drowning, 161 to fractures and contusions, 35 to wounds, and 11 to other violence.

**SOUTH-EASTERN DIVISION.**—The mortality has declined sensibly in Berkshire and Hampshire. In the counties of Surrey, Kent, and Sussex, little or no improvement is visible. The mortality in the districts of Canterbury, Thanet, Eastry, Dover, Romney Marsh, Brighton, Chichester, Portsea Island, the Isle of Wight, and Reading, was greater than in corresponding quarters of previous years. Scarlatina, small-pox, and bronchitis have prevailed in several districts.

In the **SOUTH-MIDLAND DIVISION**, the mortality in Northamptonshire increased, while it decreased in all the other counties, and more particularly in Hertfordshire, Bedfordshire, and Cambridgeshire. Measles and small-pox occurred in some districts. Scarlatina and measles were fatal to children in Northampton. In the Luton sub-district 189 births and only 77 deaths were registered. "The deaths," says the Registrar, "are a little below the average. I believe it may be accounted for by the absence of any general epidemic, and the full employment of the labouring population, who are thus enabled to procure a good supply of the necessities of life."

The health of Cambridge continues unusually good, and the mortality in the last quarter was, as has not hitherto been the case, lower than the mortality of Oxford.

Districts of	Population in 1851.	Deaths in the Winter Quarters of 5 last Years.				
Cambridge .....	27,803	194	153	155	158	121
Oxford .....	20,173	113	111	94	146	115

The Registrar of St. Andrew, Cambridge, remarks that "the deaths are 10 less than in this period last year. Several are those of persons nearly 90 years of age, and several those of very young children. I consider there are very great improvements in the sanatory arrangements of the town, and a great increase of medical skill in operation upon the increasing population. Much credit is due to the medical profession for early information of nuisances, and to the Corporation for prompt measures to remove them."

In the EASTERN DIVISION, the mortality was near the average in Essex and below the average in Norfolk.

It is gratifying to find that in several cases the better health of the population is ascribed to sanatory measures. The Registrar of West Wymer, Norwich, says: "My sub-district is unusually healthy, and there is no prevalent epidemic at this time. I am of opinion that the sanatory measures which have lately been carried into effect have had a considerable share in producing this result; at the same time much requires to be done, and particularly as regards the low lodging-houses of this city, which ought to be immediately placed under proper regulations by the sanatory committee."

The mortality of the counties in the SOUTH-WESTERN DIVISION differs little from the average, but exceeds it slightly. Scarlatina, small-pox, measles, or hooping-cough, prevailed in many districts of Wiltshire, Dorsetshire, Devonshire, Cornwall, and Somersetshire. The Registrar of Moretonhampstead notices that there were 21 births and 16 deaths in his district. He ascribes a decrease of 12 births to "emigration, and the want of employment in agricultural districts, which causes the inhabitants to leave for larger towns." In Plymouth, East Stonehouse, and Stoke Damerel the mortality was exceedingly high; the deaths in several sub-districts exceeded the registered births. Measles, scarlatina, small-pox, and fever prevailed to a great extent in this low region. In Crowan, Helston, the births were increased by the influx of labourers, for whom there was a great demand. In Glastonbury, Wells, the village of Street has a manufacture for shoes, slippers,

mats, &c., in consequence of which the population, says the Registrar, "increases, and consists principally of young men and women, who get married; hence arises an increase of births over the average." The decrease of deaths in Redruth, Cornwall, is "mainly attributed to the cheapness of provisions and the full employment of the population." Small-pox was brought to Bath by tramps from Keynsham, and would, it is believed, have spread rapidly, "had not vaccination been immediately resorted to, and urged upon parents without delay, which checked it in time."

Small-pox has prevailed very extensively; and the provision of gratuitous vaccination for the people, by the legislature, appears to be insufficient to stem its terrible progress. Several of the Registrars, who witness its effects, urge that many lives would be annually saved,—sickness, misery, and deformity prevented,—if vaccination were enforced by law. The grounds of objection, independently of negligence and apathy, lie generally in the ignorance, often in the prejudices, of the parents. These prejudices can be best and most permanently overcome by the persuasion and argument of zealous vaccinators, fortified as they will be by the experience of the neighbourhood, and such facts as the following, which cannot be too generally known:—

"One extraordinary case," says the Registrar of Tardebigg, Bromsgrove, "which shows most strongly the advantages and importance of vaccination, has occurred in my district:—A man residing in a rural part of this neighbourhood had five children, varying from 3 to 10 years of age; three of these had been vaccinated, the other two had not. The eldest was attacked by small-pox, but had it so lightly that he was confined scarcely a single day; the two next were not affected at all with the disease—these were the three that had been vaccinated. The two youngest were seized with the small-pox almost simultaneously, both died and lay dead in the house at the same time,—these were the two that had not been vaccinated."

Small-pox and typhus raged to a great extent in Nuneaton. Five of the deaths in Bulkington occurred near a place where there was a large pool of stagnant water; two of them occurred in one family, two in another, and one in a third. The Local Board of Health has now caused the pool to be drained. It would be a great progress, if, satisfied with the experience of Nuneaton, the local authorities would drain all such large stagnant pools of water in the country at once, before the lives of the people living in their neighbourhood are destroyed.

In the NORTH MIDLAND DIVISION, the health of Lincolnshire, Nottinghamshire, and Derbyshire was better than usual. A mysterious case, which requires further investigation, is described minutely in a statement addressed to the Registrar of East Retford, which will be found in the notes. Derby suffered from small-pox.

In Lancashire and Cheshire the mortality shows a disposition to rise. Diseases of the respiratory organs prevailed in Liverpool; where two deaths from cholera, one after 3 days', and one after 12 hours' illness, were recorded. One death from cholera occurred in Lancaster, which experienced much sickness. Typhus is at present prevalent in Slaidburn, Clitheroe; 3 deaths out of 4 cases happened in one house, a low thatched building, almost without ventilation, and partly under ground. In well ventilated situations the disease has assumed a milder type.

The catastrophe at Holmfirth, Huddersfield, is noticed by the Registrar, who recorded 124 births and 97 deaths in the quarter:—"On the morning of the 5th of February, at 1h. 15m. A.M., the reservoir at Billberry in this district burst, and before 2 o'clock, 81 (as nearly as I am able to ascertain) human beings perished in the rushing torrent. Of these 47, viz., 22 males and 25 females, were registered in this district; 2 bodies are yet wanting."

Leeds and Hunslet were less healthy than usual. The births and deaths in Sheffield exceeded the average. The population is rapidly increasing. Vaccination has been greatly neglected, and in consequence small-pox has been prevalent and fatal.

In the NORTHERN DIVISION, the mortality exceeded the average in Durham, Northumberland, and Westmoreland. At Bedlington, Morpeth, ten persons were labouring under small-pox at the same time in one house; in another, 4 had typhus, of whom 2 died. Scarlatina was exceedingly fatal in Kendal.

The deaths in Monmouthshire, North Wales, were below, in South Wales above, the average of corresponding quarters. Scarlatina prevailed in the lower part of Shirenewton, Chepstow, where the land is low and marshy.

## MORTALITY OF THE METROPOLIS.
